

CYBER RESILIENCY

Cyber-resilience is the ability of an organisation to maintain its primary goals and integrity in the face of the latent threat of cybersecurity attacks.

Cyber attacks

Cyber Attacks are on the increase, the impact to your business is real with new threats appearing on a daily basis. The challenge to businesses is how to keep up and stay ahead of these threats? With threats moving to fileless attacks (77% of all successful attacks are fileless). The attack profile has changed, have you adapted to meet these changes?

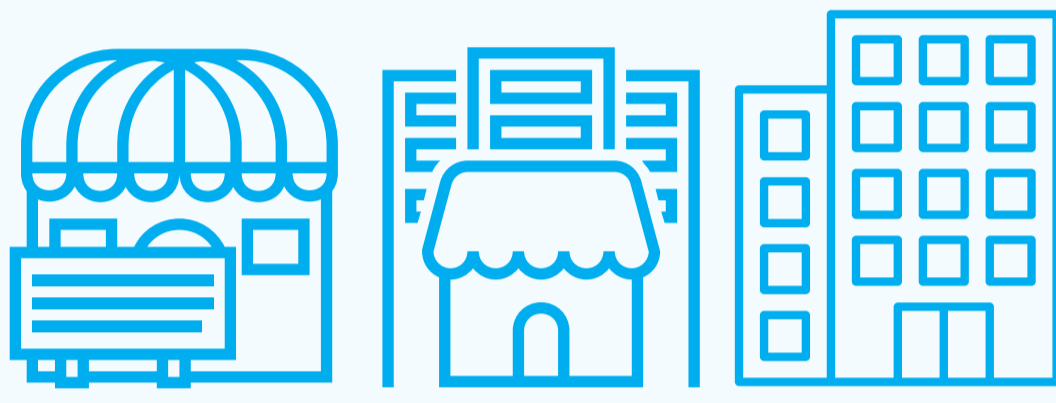

Are you ready ?

Be aware! One bad click and your data could be exposed.

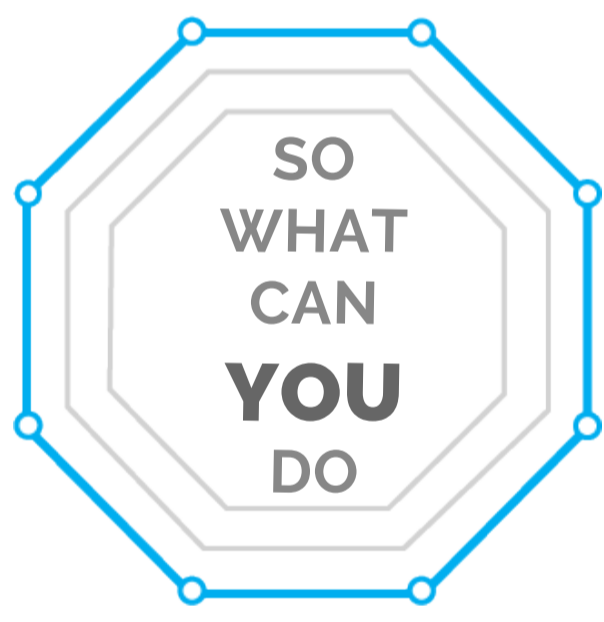

Are you cyber resilient ?

WHAT ARE THE COSTS ?

OF BUSINESSES AFFECTED:

- 21%** of SMEs paid ransom
- Of those that pay... **18%** did not regain access to data
- 11%** still have viruses remaining in their network

Obtain a Cyber Essentials certificate.

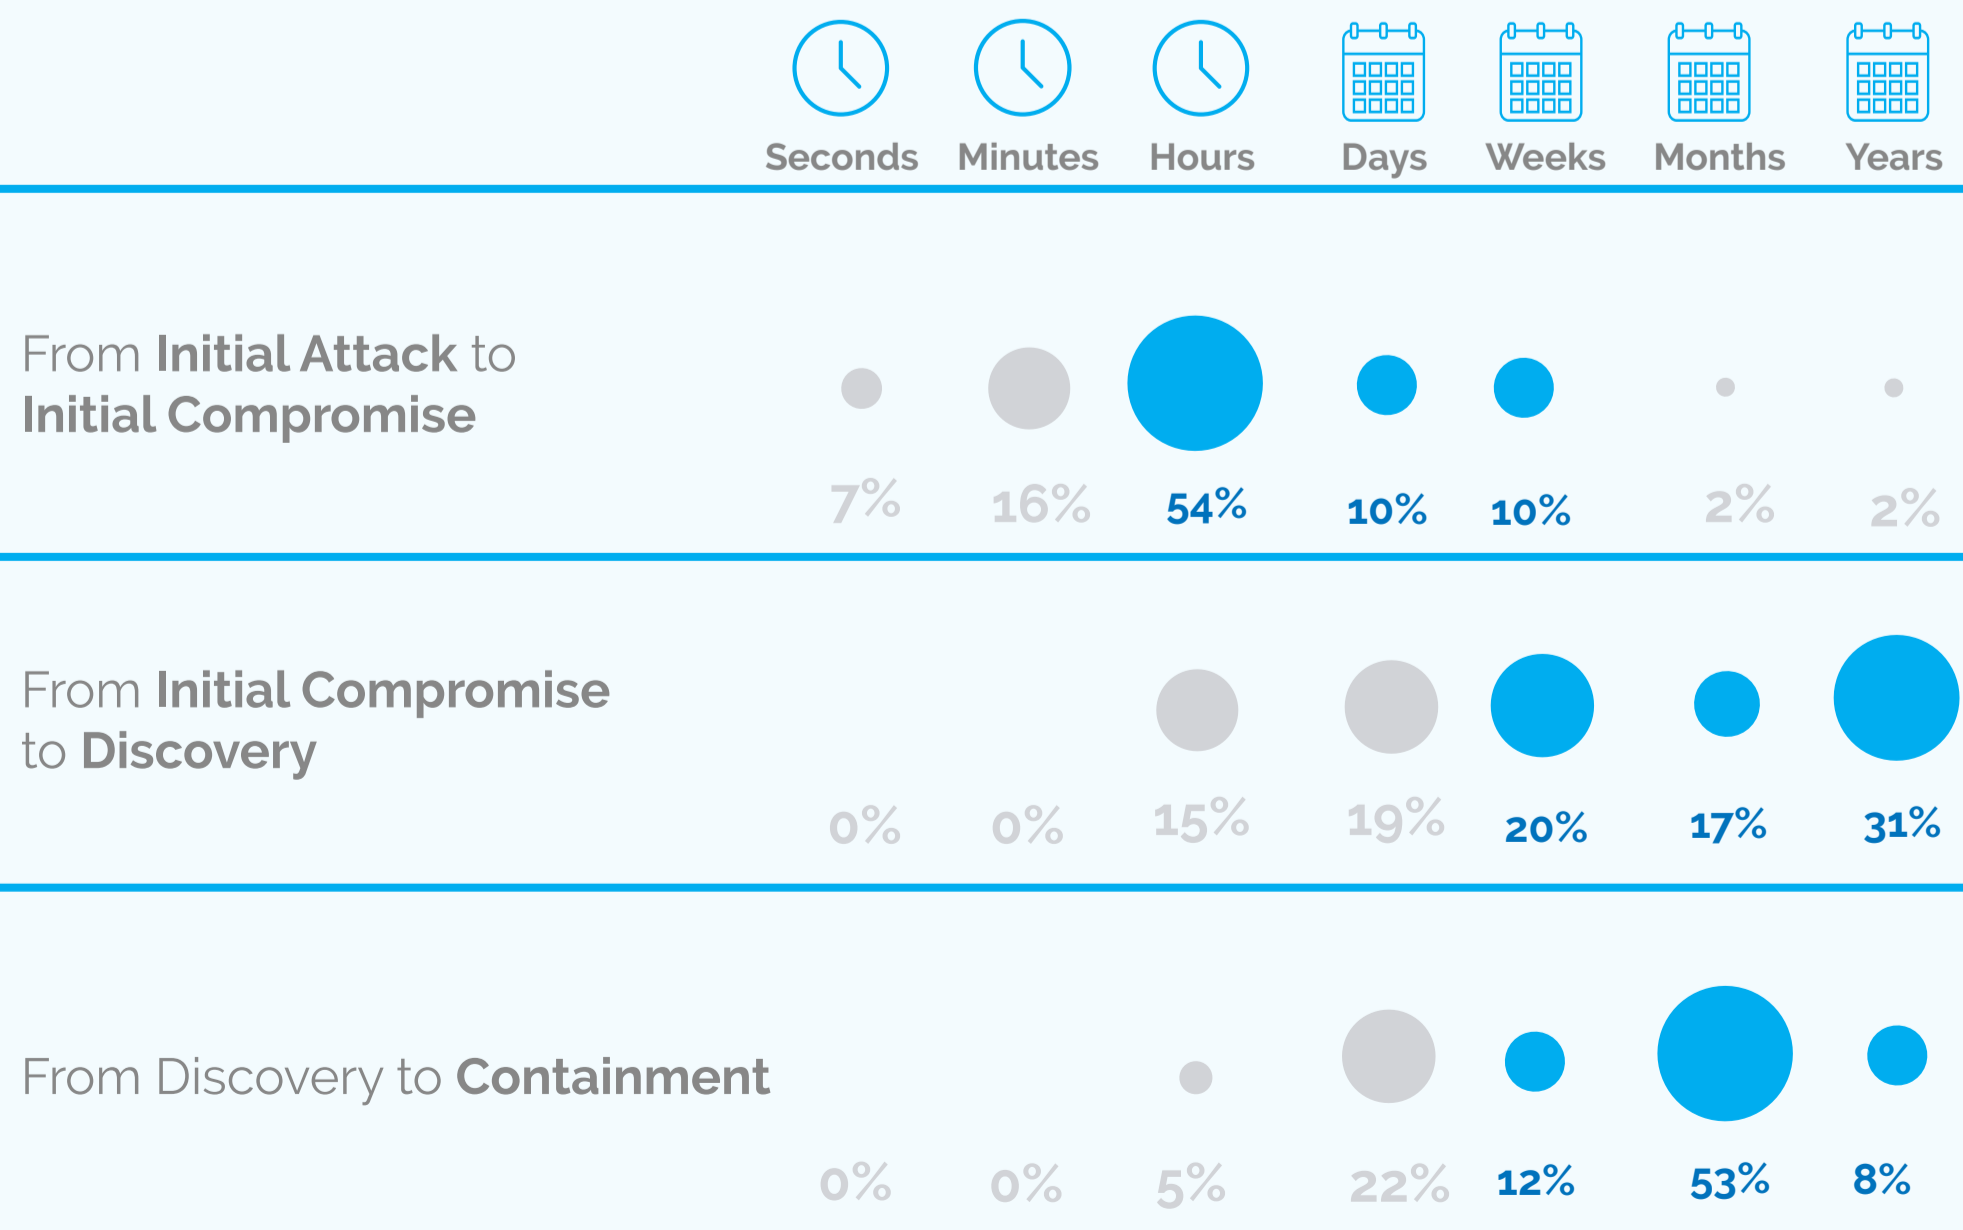

The first step is to achieve Cyber Essentials certification, a UK government backed scheme designed to protect you against the most common cyber attacks.

Steps to achieve Cyber Essentials

- 1** Have us perform an audit and readiness report in preparation for your certification
- 2** Apply for certification (we will guide you through this process)
- 3** Implement your Cyber Risk Management Controls
- 4** Ensure your patch management policies are responsive to security changes

A typical attack & response timeline
